

Kansas Public Employees Deferred Compensation Plan

Fund Mapping

The following chart shows how your current account balance and future contributions will transfer to the new investment options.

The new investment options are shown below in the right hand column. Your current investment options will automatically transfer to one of the new options through a process called “fund mapping.” Fund mapping matches each current option with the most similar option in the new menu based on fund strategy and objectives, risk profile, holdings, and long-term performance potential. The options listed in the “Current Investment Options” column on the left will map to the options listed in the “New Investment Options” column on the right.

Variable investment options offered under a funding agreement are intended as long-term investments designed for retirement purposes. Money distributed will be taxed as ordinary income in the year the money is distributed. Account values fluctuate with market conditions, and when surrendered the principal may be worth more or less than the original amount invested. ING StabilizerSM is offered under a group annuity contract. An annuity does not provide any additional tax deferral benefit; tax deferral is provided by the plan. Annuities may be subject to additional fees and expenses to which other tax-qualified funding vehicles may not be subject. You should consider the investment objectives, risks, charges and expenses of the investment options carefully before investing. The prospectuses containing this and other information can be obtained by contacting your local representative. Please read the information carefully before investing.
